

Sustainable Diversity Great

Who

We are

Bioelit was founded in 2021 by a group of scientists from various fields of natural science who wanted to promote the conservation and sustainable management of Ecuador's natural resources.

Mission

Enhance the fair and equitable distribution of ecosystem services and build the bridge that connects our stakeholders and together be able to find solutions to the various environmental issues faced by Ecuador. We believe that by working together, we can make a difference.

Vision

Contribute to developing a healthy, functional, and resilient coastal marine ecosystem that provides environmental goods and services to current and future generations.

The ocean is a vast and ever-changing landscape, and our team is dedicated to understanding the many different ways in which human activity can impact it. From studying oil spills and microplastics to ghost nets and introducing invasive marine species, we are constantly working to generate high-impact scientific knowledge that can help protect this vital ecosystem.

Nature ^{Based} Solutions

We collaborated in the creation of El Pelado Marine Reserve and we have been helping a local fisher community to have better livelihood opportunities while promoting ecological and recreational scuba diving instead of the direct extraction of fishing resources. That's how we save our planet.

Future Change

Our foundation is aligned with several sustainable development objectives because we want to build a better future for all.

- 4 | Quality education
- 5 | Gender equality
- 6 | Clean water and sanitation

- 10 | Reduced inequalities
- 11 | Sustainable cities and communities
- 15 | Life on land

A message to our shareholders

We are proud to be one of the leading environmental foundations in our country, and we are committed to using our resources to make a positive impact on the environment.
